The screenshot shows the Simatic Key Installer application window. The title bar reads "Simatic Key Installer 2011/05/22 International forum http://plcforum.uz.ua (ex plc.net.ru), links http://DataBridge.narod.ru". The interface includes a left sidebar with a tree view of keysets, a top toolbar with icons for "Refresh Disks", "Install Short", "Install Long", "Find key", "Yellow Disk", and "Help". A table in the center lists available licenses with columns for "Select", "Short name", "Long name", "License name", and "Version". An "About EKB Install" dialog box is open, displaying a yellow SIMATIC Multi Authorization Disk (MAD) with the text "Справочник по программам систем автоматизации Simatic Version 2011/05/22" and "SIMATIC MULTI AUTHORIZATION DISK". Below the dialog, there are radio button options for license types and preferred installation methods.

Imaging experts at Children's Hospital Los Angeles announced Thursday a breakthrough that allows cardiologists to do detailed cardiac scans of babies and young children who are having testing done for a heart condition. The new technology uses a noninvasive diagnostic technique called dual-energy computed tomography (CT) imaging. Since the introduction of CT technology several decades ago, the tomography part of the test has been used to make precise images of the bones, soft tissues and organs of the human body, including the heart. But until now, CT technology has been considered unsafe for children because of the high radiation exposure associated with the test, said Dr. John Marple, director of cardiology at Children's Hospital Los Angeles. The dual-energy CT technology has proven effective in adults, he said. "We used the adult model, knowing that this technology would work, and then we figured out how to apply it to children," he said. The technology dramatically reduces the radiation exposure in the patients, and the team of doctors in cardiology and radiology used the adult guidelines on reducing radiation exposure for children. "And we got very good results," Marple said. "We believe it's a very safe procedure. We've looked at the long-term follow-up and we've seen no evidence of the radiation-induced cancer."
